

1st International conference on quenching and control of distortion – ICQCD
Licolnshire IL, USA, 1993

Table of Contents

Session 1: Quenchants and Quenching Technology I

Measurement and Evaluation of the Quenching Power of Quenching Media for Hardening	1
<i>J. Bodin and S. Segerberg; Swedish Institute of Production Engineering Research; Göteborg, Sweden</i>	
Quenchants: Yesterday, Today, and Tomorrow	13
<i>J. Hasson; E.F. Houghton & Co.; Valley Forge, Pennsylvania</i>	
Workshop Designed System for Quenching Intensity Evaluation and Calculation of Heat Transfer Data	17
<i>B. Liscic, S. Svaic and T. Filetin; University of Zagreb; Zagreb, Croatia</i>	
Possibilities and Limits to Predict the Quench Hardening of Steel	27
<i>H.M. Tensi and A. Stich; Technical University of Munich; Munich, Germany</i>	
Application of Quench Factor Analysis to Predict Hardness Under Laboratory and Production Conditions.....	33
<i>C.E. Bates; Southern Research Institute; Birmingham, Alabama</i>	
<i>G.E. Totten; Union Carbide Chemicals and Plastics Co. Inc.; Tarrytown, New York</i>	
The Mathematical Modelling of Temperature and Microstructure During Spray Cooling.....	41
<i>P.D. Hodgson, K.M. Browne, R.K. Gibbs, T.T. Pham, and D.C. Collinson; BHP Research-Melbourne Laboratories; Mulgrave, Victoria, Australia</i>	

Session 2: Quenchants and Quenching Technology II

The M-7 Steel: Its Sub-Zero Treatments, Mechanical Properties, and Temperatures.....	51
<i>D.M.K. Grinberg and A. Grinberg; Universidad Nacional Autonoma de Mexico; University City, Mexico</i>	
<i>I.V. Carrasco; Universidad Autonoma Metropolitana-Azcapotzalco; Azcapotzalco, Mexico</i>	
Eleven Years Quenching With P.A.G. (Polyalkylene Glycol)	59
<i>E. Varela and P. Córdoba; Acindar S.A.; Buenos Aires, Argentina</i>	
Conversion and Use of Polymer Quenchants in Integral Quench Furnace Applications	65
<i>D. Diaz; Union Carbide Quimicos Y Plasticos; Mexico City, Mexico</i>	
<i>H. Garcia; Spicer Group-Mexico; Queretaro, Mexico</i>	
<i>B. Bautista; Spicer Group-Mexico; Celeya, Mexico</i>	
Advances In Fluidized Bed Quenching	71
<i>A. Dinunzi; Procedyne Corp.; New Brunswick, New Jersey</i>	
HIP Quencher for Efficient and Uniform Quenching	79
<i>C. Bergman; ABB Autoclave Systems; Västerås, Sweden</i>	
<i>S. Segerberg; Swedish Institute of Production Engineering Research; Göteborg, Sweden</i>	

Session 3: Processes/Equipment

Distortion Control with Martempering Oils.....	83
<i>R.J. Brennan; E.F. Houghton & Co. Inc.; Valley Forge, Pennsylvania</i>	

Salt Bath Quenching	87
<i>R.W. Foreman; Park Metallurgical Corp.; Detroit, Michigan</i>	
Quench Tank Agitation.....	95
<i>K.S. Lally and M.W. Kearny; Lightnin Inc.; Rochester, New York</i>	
<i>G.E. Totten; Union Carbide Chemicals and Plastics Co. Inc.; Tarrytown, New York</i>	
Poly (Alkylene Glycol) Concentration Control and Reclamation Using Membrane Technology as Applied to Steel Heat Treatment	107
<i>R.D. Howard; Despatch Industries Inc.; Minneapolis, Minnesota</i>	
<i>L.F. Comb; Osmonics, Inc.; Minnetonka, Minnesota</i>	
Vacuum Quenching Improvements Through Controlled Atmospheres	113
<i>R. Holoboff; Liquid Air Corp.; Countryside, Illinois</i>	
<i>B. Lhôte; L'Air Liquide; France</i>	
<i>R. Speri; Vide et Traitement; France</i>	
<i>O. Delcourt; Peugeot S.A.; France</i>	
Continuously Variable Agitation in Quench System Design	119
<i>S.W. Han and S.G. Yun; Sam Won Industrial Corp.; Ahson, Korea</i>	
<i>G.E. Totten; Union Carbide Chemicals and Plastics Co. Inc.; Tarrytown, New York</i>	
HF Pulse Hardening in the Millisecond Range	127
<i>G. Plöger; Hagenuk/Impulsphysik GmbH; Hamburg, Germany</i>	

Session 4: Equipment/Heat Transfer

Benchmark Testing of Computer Programs for Determination of Hardening Performance.....	133
<i>J. Bodin and S. Segerberg; Swedish Institute of Production Engineering Research; Göteborg, Sweden</i>	
The Use of Glutaraldehyde for Microbiological Control in Polymer Quenchants.....	141
<i>J.F. Kramer; Union Carbide Chemicals and Plastics Co. Inc.; Bound Brook, New Jersey</i>	
Analysis of Quenching and Heat Treating Processes Using Inverse Heat Transfer Method.....	147
<i>J.V. Beck and A.M. Osman; Michigan State University; East Lansing, Michigan</i>	
Determination of Quench Heat-Transfer Coefficients Using Inverse Techniques	155
<i>B. Hernandez-Morales, J.K. Brimacombe, and E.B. Hawbolt; The University of British Columbia; Vancouver, British Columbia, Canada</i>	
<i>S.M. Gupta; Tree Island Industries Ltd.; Richmond, British Columbia, Canada</i>	
Variation in the Heat Transfer Coefficient Around Components of Different Shapes During Quenching	165
<i>S. Segerberg and J. Bodin; Swedish Institute of Production Engineering Research; Göteborg, Sweden</i>	
The Influence of Heat Transfer on the Development of Stresses, Residual Stresses and Distortions in Martensitically Hardened SAE 1045 and SAE 4140.....	171
<i>A. Majorek, B. Scholtes, H. Müller, and E. Macherauch; Institut für Werkstoffkunde I, Universität Karlsruhe (TH); Karlsruhe, Germany</i>	

Session 5: Quenching and Residual Stress I

Heat Treatment, Microstructures, and Residual Stresses in Carburized Steels	181
<i>G. Krauss; Colorado School of Mines; Golden, Colorado</i>	

Residual Stresses and Their Measurement	193
<i>C.O. Ruud; Penn State University; University Park, Pennsylvania</i>	
Reduction of Distortion Caused by Heat Treatment on Automobile Gear Steels.....	199
<i>T. Fukuzumi; Mitsubishi Steel Mfg. Co. Ltd.; Tokyo, Japan</i>	
<i>T. Yoshimura; Yoshimura Technical Office Inc.; Tokyo, Japan</i>	
Metallo-Thermo-Mechanical Simulation of Quenching Process—Theory and Implementation of Computer Code “Hearts”.....	205
<i>T. Inoue and D-Y. Ju; Kyoto University; Kyoto, Japan</i>	
<i>K. Arimoto; CRC Research Institute Inc.; Osaka, Japan</i>	
Modeling Distortion and Residual Stress In Carburized Steels.....	213
<i>M. Henriksen; University of North Dakota; Grand Forks, North Dakota</i>	
<i>D.B. Larson and C.J. Van Tyne; Colorado School of Mines; Golden, Colorado</i>	
A Fundamental Based Microstructural Model for the Optimization of Heat Treatment Processes	221
<i>B. Buchmayr; Graz University of Technology; Graz, Austria</i>	
<i>J.S. Kirkaldy; McMaster University; Hamilton, Ontario, Canada</i>	

Session 6: Quenching and Residual Stress II

Prediction of Macro- and Micro-Residual Stress in Quenching Using Phase Transformation Kinetics	229
<i>S. Das, G. Upadhyay, and U. Chandra; Concurrent Technologies Corporation; Johnstown, Pennsylvania</i>	
Quench Analysis of Aerospace Components Using FEM.....	235
<i>R.I. Ramakrishnan; Wyman-Gordon Co.; North Grafton, Massachusetts</i>	
Crack Susceptibility of Nickel-Copper Alloy K-500 Bars During Forging and Quenching	243
<i>M.L. Tims, J.D. Ryan, and W.L. Otto; Concurrent Technologies Corporation; Johnstown, Pennsylvania</i>	
<i>M.E. Natishan; Naval Surface Warfare Center; Annapolis, Maryland</i>	

Session 7: Quenching and Distortion

Factors Affecting Distortion In Hardened Steel Components.....	251
<i>M.A.H. Howes; INFAC/IIT Research Institute; Chicago, Illinois</i>	
Effect of Carburizing Process Parameters on Distortion of AISI 4118 Gears	259
<i>S. Saboury; Bradley University; Peoria, Illinois</i>	
Dimensional Changes During Hardening and Tempering of Through-Hardened Bearing Steels	265
<i>H. Walton; Torrington Co.; Shiloh, North Carolina</i>	
The Effects of Quenchant Media Selection and Control on the Distortion of Engineered Steel Parts.....	275
<i>R.T. von Bergen; Houghton Vaughn plc.; Birmingham, England</i>	
Distortion Prediction Using the Finite Element Method	283
<i>G.J. Petrus, T.M. Krauss, and B.L. Ferguson; Deformation Control Technology, Inc.; Cleveland, Ohio</i>	

Effect of Process Parameters on Distortion	287
<i>W.A.J. Moerdijk; Houghton Benelux B.V.; Oosterhout, The Netherlands</i>	

Posters

Study of Isothermal Heating and Surface Quenching Quality During Laser Heat Treatment.....	297
<i>J. Ding, K. Mukherjee, C. Chen, and X. Chen; Michigan State University; East Lansing, Michigan</i>	
An Indirect Method for Quantitative Characterization of the Quenching Power of Quenching Media	301
<i>T. Réti, I. Czinege, and M. Réger; Bánki Donát Polytechnic; Budapest, Hungary J. Takács; Recard Company; Győr, Hungary</i>	
The Heat Treating Machine for Advanced and Extreme Vacuum Heat Treating Requirements.....	311
<i>P. Heilmann; Leybold Duferrit; Hanau, Germany W.R. Zenker; Leybold Technologies; Enfield, Connecticut</i>	
Martempering and Austempering of Steel and Cast Iron.....	319
<i>G. Wahl; Leybold Duferrit GmbH; Hanau-Wolfgang, Germany</i>	
Study on UCON® Quenchant A in Application Test.....	327
<i>Z. Wen-Shang; Institute of Aeronautical Materials; Beijing, China</i>	
Residual Stresses in Laser Heat Treatment of Plane Surfaces.....	333
<i>J. Grum and P. Zerovnik; Faculty of Mechanical Engineering; Murnikova, Ljubljana, Slovenia</i>
