

3rd International conference on quenching and control of distortion – ICQCD
Prague, Czech Republic, 1999

Contents

Introduction	1
<hr/> Session 1 Quenching Media and Heat Transfer <hr/>	
New quenchants and cooling technology, current status and future (Invited Paper) [01] K. Funatani, Nihon Parkerizing CO. LTD. (Japan)	5
Analysis of heat transfer processes at steel quenching [02] F. A. Krivoshey, N. I. Kobasko, Ukrainian National Academy of Sciences (Ukraine)	17
Liquid-gas mixtures for quenching [03] M.S. Stanescu, W. Niehoff, K. Grieshaber, BOC Gases Americas – U.S. (USA); P. Stratton, BOC Gases Europe (United Kingdom); D.L. Moore, Instruments and Technology Inc.(USA)	26
Life cycle assessment of quenching fluids [04] E. H. Troell, N.-E. Strand, The Swedish Institute of Production Engineering Research, Molndal, Sweden	39
<hr/> Session 2 Gas and Spray Quenching <hr/>	
Fundamentals of high-pressure gas quenching in application to industrial steel hardening (Invited Paper) [05] F. Preisser, ALD Vacuum Technologies GmbH (Germany)	45
Water spray and water film cooling (Invited Paper) [06] G. E. Totten, Union Carbide Corporation (USA); H. M. Tensi, Technical University of Munich (Germany)	50
Heat transfer and cooling characteristics of individual parts gas quenching [07] D. Bergmann, U. Heck, U. Fritsching, K. Bauchhage, Institute for Material Science (Germany)	62
Controllable heat extraction during gas quenching effect on distortion and depth of hardening [09] B. Liscic, University of Zagreb (Croatia); Th. Lübben, F.T. Hoffmann, IWT Bremen (Germany)	72
Gas quenching: influence of diameter and heat transfer coefficient on hardness for different steel grades [10] Th. Lübben, F. Hoffmann, P. Mayr, IWT Bremen (Germany); C. Laumen, AGA Gas GmbH & Co. KG (Germany)	83
Flow considerations in quenching vessels [11] J. Ferrari, N. Ipek, Faxen Laboratory (Sweden); N. Lior, University of Pennsylvania (USA); T. Holm, AGA AB (Sweden)	93
<hr/> Session 3 Quenching Processes Methods, Parameters, Influences <hr/>	
Optimization of intensive steel quenching methods (part I) [12] N.I. Kobasko, Engineering Thermophysics Institute of the National Academy of Sciences (Ukraine); G.E. Totten, Union Carbide Corporation (USA); M.A. Aronov, American Gas Association (USA)	105
Influence of wetting behaviour on cooling characteristics during quenching of hot metal [13] M. Narazaki, M. Kogawara, A. Shirayori, S. Fuchizawa, Utsunomiya University (Japan)	112
Efficiency and application of electrolytic - plasma quenching (EPQ) [15] Yu. Tyurin, E.O. Paton Electric Welding Institute (Ukraine)	121

Quenching at low temperature of Al metal matrix composites reinforced with sic whiskers or particles [16]	127
S. Coniglione, C. Patuelli, R. Tognato, Istituto Nazionale di Fisica della Materia (Italy)	
The carburic phase in frozen HSS cutting tools [17]	137
V. Bulancea, I. Alexandru, D. Condurache, D. Bulancea, Technical University "Gh. Asachi" (Romania)	

Session 4 Simulation and Modelling

Finite element simulation of coupled carbon diffusion, metallurgical transformation and heat transfer with applications in the automobile industry [18]	145
J-M. Bergheau, ENISE (France); F. Boitout, Systus International (France); S. Denis, A. Simon, Ecole des Mines de Nancy (France)	
Multi-phase modeling of austenite transformation processes during quenching [19]	157
T. Reti, Z. Fried, Banki Donat Polytechnic (Hungary); I. Felde, Bay Zoltan Institute of Material Sciences and Technology (Hungary)	
A procedure to implement microstructural evolution in a commercial FE program [20]	173
Y. Ghanimi, B. Buchmayr, Graz University of Technology (Austria)	
Inverse method for determining the quenching conditions using a residual stress field [21]	182
S. Rasouli Yazdi, J. Lu, Mechanical Systems and Concurrent Engineering Laboratory (France)	
A software tool to simulate quenching of alloy steels [22]	188
B.L. Ferguson, G. J. Petrus, Deformation Control Technology, Inc (USA); T. Pattok, National Center for Manufacturing Sciences (USA)	
Simulation and experimental verification of quenching steel workpieces having complex shape [23]	201
B. Smoljan, University of Rijeka (Croatia); B. Liscic, University of Zagreb (Croatia)	
Efficient data encoding and filtering for quenching analysis [24]	208
I. Felde, Bay Zoltan Institute of Materials Science and Technology (Hungary); T. Reti, Banki Donat Polytechnic (Hungary); X. L. Chen, Automated Analysis Corporation (USA)	

Session 5 Simulation, Measuring, Control and Prediction

Simplified property predictions AISI 4140 based on quench factor analysis [25]	219
G.E. Totten, Y. H. Sun, Union Carbide Corporation (USA); Ch.E. Bates, University of Alabama at Birmingham (USA)	
Innovation in heat treating by controlling the quenching tank agitation with a newly developed flow meter [26]	226
K. Lainer, H. M. Tensi, Technical University of Munich (Germany); G. E. Totten, Union Carbide Corporation (USA)	
The "fluid-quench-sensor" - a new development for ensuring reproducible quenching results in liquid quench systems [27]	235
M. Lohrmann, Ipsen International GmbH (Germany)	
Characterization of cooling uniformity in an integral batch oil quench [28]	240
G. Keil, S. Tipton, W. Supak, M. Pershing, Ph. Krumholz, Caterpillar Inc. (USA)	
Simulation of dual frequency induction hardening process of a gear wheel [29]	243
T. Inoue, H. Inoue, F. Ikuta, Kyoto University (Japan); T. Horino, Neturen Co. Ltd (Japan)	

Computer aided design of complicated quenching process by means of numerical simulation method [30]	251
P. Jiansheng, G. Jianfeng, T. Dong, D. Ruan, Shanghai Jiao Tong University (China); G. E. Totten, Union Carbide Corporation (USA); X. L. Chen, Automated Analysis Corporation (USA)	

Session 6 Residual Stresses

Prediction of residual stress and distortion of ferrous and non-ferrous metals: current and future developments (Invited Paper) [31]	263
S. Denis, P. Archambault, E. Gautier, A. Simon, G. Beck, Ecole des Mines de Nancy (France)	
Influence of original state of microstructure on fracture of metals [32]	277
D. Renowicz, Silesian University of Technology (Poland)	
3D Finite element simulation of residual stresses & distortions of cooling steel workpieces [33]	288
Ch. Aliaga, E. Massoni, Cemef Ecole des Mines de Paris (France); J.-Ch. Louin, S. Denis, Ecole des Mines de Nancy (France)	

Session 7 Distortion Prediction

Control of residual stress formation during quenching [35]	301
N. I. Kobasko, V. S. Morganyuk, V. V. Dobrivecher, National Academy of Sciences (Ukraine)	
Numerical prediction of heat treatment distortion of high speed steels - Importance of pro-eutectoid carbides [36]	311
A. Thuvander, Swedish Institute for Metals Research (Sweden); A. Germidis, Erasteel Kloster AB (Sweden)	
Dimensional control of bearing races after heat-treatment [39]	322
S. K. Bhattacharyya, S. Ghosh, G. S. Rattan, The Tata Iron and Steel Co. Ltd. (India)	
Development of stress, residual stress and distortion during gas quenching of SAE 52100 cylinders and rings – Simulation and experiment [40]	333
R. Kübler, H. Müller, Detlef Löhe, University of Karlsruhe (Germany)	
The modelling residual stresses of carburizing chromium and chromium-nickel of constructional steels after quench hardening in different quenching mediums [41]	340
M. Przylecka, W. Gestwa, Poznan University of Technology (Poland)	

Session 8 Modelling and Simulation

Modeling the heat treatment behavior of a transmission ring gear blank [42]	355
C. Mgbokwere, W. Dowling, W. Copple, C. Mack, Ford Motor Company (USA); D. Smith, Colorado School of Mines (USA)	
Modeling of grain size formation in a new heat treatment [74]	365
J. I. Leinonen, University of Oulu (Finland)	
Computer simulation of induction heating and quenching processes [45]	370
V. S. Nemkov, R. C. Goldstein, Centre for Induction Technology (USA); V. A. Bukanin, A. Zenkov, D. Koutchmassov, St. Petersburg Electrotechnical University (Russia)	
A validated technique to describe non-linear heat transfer behaviour applicable to process modelling [46]	378
S. D. Cox, S. J. Hardy, University of Wales Swansea (United Kingdom); D. J. Parker, British Steel Strip Products-Welsh Technology Centre (United Kingdom)	
Residual stress measurement in case of traction motor pinion after shot peening [58]	485
S. D. Makashir, A. N. Gambhir, Kirloskar Pneumatic Co Ltd. (India)	

Session 11 Poster Session

The influence of heat treatment on shape memory effect in CuZnAl and CuAlNi alloys [59]	493
Y. Aydogdu, A. Aydogdu, O. Adiguzel, Firat University (Turkey)	
Wear-resistance of 12% Cr tool steel after cryogenic treatment [60]	499
T. Xiaohui, C. Zailiang, Beijing Research Institute of Mechanical and Electrical Technology (China)	
Features of heat by plasma of an electrolyte on a water basis [61]	505
Yu. Tyurin, E.O. Paton Electric Welding Institute (Ukraine)	
Regularities of structure and properties of sintered by high-rate electric heating powder steels after quenching [62]	510
L.O. Andrushcik, Institute of Metal Physics of Ukrainian Academy of Sciences (Ukraine)	

Evaluation of testing methods of cooling power of liquid quenchants [63]	515
K. Funatani, Nihon Parkerizing Co. Ltd (Japan); M. Narazaki, Utsunomiya University (Japan); M. Tanaka, Nissho Engineering Co. Ltd (Japan)	
The influence of several quenching conditions on the working life of high-speed steels hardened by laser processing [64]	522
S.M. Levcovici, "Lower Danube" University of Galatzi (Romania); V. Munteanu, D.T. Levcovici, ICPPAM (Romania); B. G. Levcovici, S.C."Galfinband"-S.A. (Romania)	
The influence of refrigeration on the high-speed steels hardened by laser processing [65]	527
S.M. Levcovici, "Lower Danube" University of Galatzi (Romania); D. T. Levcovici, ICPPAM s.a. (Romania)	
Influence of various quenching oils and polymeric water solutions on mechanical properties of steel [66]	530
J. Grum, S. Bozic, University of Ljubljana (Slovenia)	
The modelling residual stresses of carbonitriding chromium and chromium-nickel steels after quench hardening in different quenching mediums [69]	542
M. Przylecka, W. Gestwa, Poznan University of Technology (Poland)	
New structural aspects of heat treated eutectics Al-5,7%Ni and Al-4,7%Fe [70]	554
P.C. Olaru, Olmet Faur S.A. (Romania)	
Technology and equipment electrolytic - plasma quenching (EPQ) [72]	560
Yu. Tyurin, E.O. Paton Electric Welding Institute (Ukraine)	
Power inductors™ for heat treating processes [73]	564
R. S. Ruffini, R. T. Ruffini, Fluxtrol Mfg (USA); V. S. Nemkov, Centre for Induction Technology (USA)	
Continuous material hardness measuring process [75]	570
J. P. Piantino, E. Trottet, RADJSA / EJVD (Switzerland)
